Projektleiter/-in Klauenbösch Beat
Autor/-in Beat Klauenbösch
Ausgabestelle PM84
Klassifizierung Intern
Ausgabedatum 25. Januar 2018
Version V01.17

Änderungskontrolle

Version	Überarbeitung	Autor/-in	Datum
X01.01	Neues Dokument	Beat Klauenbösch, PM84	14.12.2015
X01.02	Ergänzungen und Detaillierungen ab BUC2	Beat Klauenbösch, PM84	11.01.2016
X01.03	Detaillierung nach Workshop SPS und internen Diskussionen	Beat Klauenbösch, PM84	24.03.2016
X01.04	Final Version and english translate	Beat Klauenbösch, PM84	13.04.2016
X01.05	Supplement BUC2 and BUC-2 Fafo-2-2 with following text: - Datas with "No further processing" will recorded statistically and process is ended. Supplement BUC-5: new graphics in BUC-5 FUN-5-1 No Masterdataimport from ZDL	Beat Klauenbösch, PM84	11.05.2016
V01.06	- Supplement BUC-2 FUN-3-2: Data from datatransfer to use for match - Suppplement chapture 3.7 BAfo-13: Housekeeping - Supplement chapture 3.8 - Version as Baseline for design	Beat Klauenbösch, PM84	23.05.2016
V01.07	- BUC-3: We will use DPM (Datenprüfmodul) from Siemens and not Adresschecker (open points in BUC-1 and BUC-3)	Beat Klauenbösch, PM84	17.06.2016
V01.08	- Figure 1 (Overview) and Figure 2 (Flowchart) changed - BUC-3: Details to Processing Datatransfer Datas in BUC-3	Beat Klauenbösch, PM84	29.06.2016
V01.09	- SAfo-8: delete column PLZ_OROT - Fafo-1-2: ZUBOFI delivery only weekly - Deliverytime masterdata from AMP - New name by SMT-Share for ZUBOFI (FaFo-1-2) - Regex für Filterung angepasst (FaFo-2-2) - CallerID=VG for matched data to VAM (FaFo-3-4) - Fafo-2-2: Filterregel angepasst	Beat Klauenbösch, PM84	10.11.2016
V01.10	- BUC-3: data from EAL to PADASA only if AMP.Key	Beat Klauenbösch, PM84	16.11.2016
V01.11	- Capture 3 inserted: State of BUC and FUN - BUC-3: Insert table for match and send - BUC-3, FaFo-3-3 and FaFo-3-4: Addition with AMP-Key>0	Beat Klauenbösch, PM84	14.12.2016
V01.12	- Filter complement (BUC-2, FaFo-2-2) mit CODQUAL=61 - New starttime 04:00 AMP-Delta import (BUC-1 FaFo-1-1) - ASDP change deliver time from 02:00 to 22:45	Beat Klauenbösch, PM84	02.03.2017
V01.13	- ASDP change deliver time from 22:45 to 19:00 - BUC-3: send to PADASA if also only a Hauskey is available	Beat Klauenbösch, PM84	17.05.2017
V01.14	- Change in FUN-4-1: update process describe in VAE_Agreement_zu_Erfassungsregeln	Beat Klauenbösch, PM84	17.07.2017
V01.15	- Document updated - SAfo-7: Change format for table ialias from csv to xml	Beat Klauenbösch, PM84	08.09.2017
V01.16	- Change in BUC-3 FaFo-3-1 and FaFo-3-3 (Ticket https://jira.post.ch/browse/DISCO-6 attach ItemUID)	Beat Klauenbösch, PM84	31.10.2017
V01.17	- Change in BUC-4 FUN-4-2 FaFo-4-5 (Ticket https://jira.post.ch/browse/DISCO-9 attach ItemUID)	Beat Klauenbösch, PM84	25.01.2018

1. General requirements

Nr.	Reference to goals	Requirements	Type (A, B, D, E, F, I, M, Q, S)	Acceptance criterion	Importance (1-5)	Priority (1-5)
GAfo-1	Z-05	Provide Master data	S	All master data are stored in DisCo and are available for the manual capture.	1	1
GAfo-2	Z-04 und Z-06	Provide consignment data	F	PDS data are stored in DisCo in a defined performance.	1	1
GAfo-3	Z-06	Match and distribute data	A	DataTransfer data are verified and stored, Data are processed correctly.	1	1
GAfo-4	Z-05	Offshore data entry	F	Manual data entry performed	1	1
GAfo-5	Z-01	Complete processing	F	Datamatrixcode are read where needed. Processing of the consignment is completed.	1	1

Legend:

- Type: A = Software architecture, B = Business, D = Documentation, E = Development, F = Functional, I = Information security (ISDS), M = Migration, Q = Quality, S = Interface.
- Importance: 1 = must be implemented; 2 = very important, 3 = important, 4 = less important, 5 = can be omitted.
- Priority: 1 = must be implemented as per deadline, 2 = deadline compliance is very important, 3 = deadline compliance is important, 4 = deadline compliance is less important, 5 = may be postponed.

2. Overview of requirements

A graphical overview of the system will help to understand the detailed requirements in a structured manner.

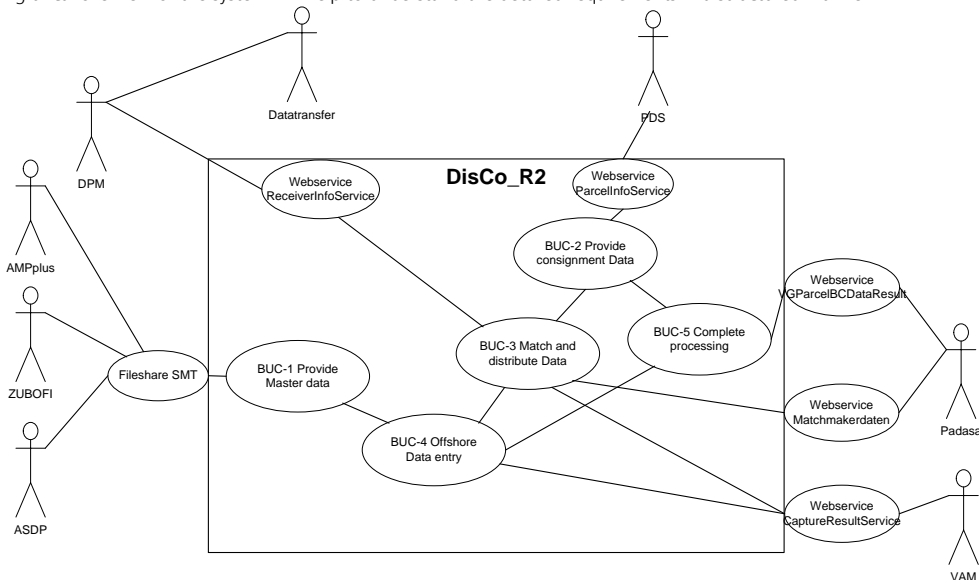

Figure 1 Overview of interfaces and Use Cases

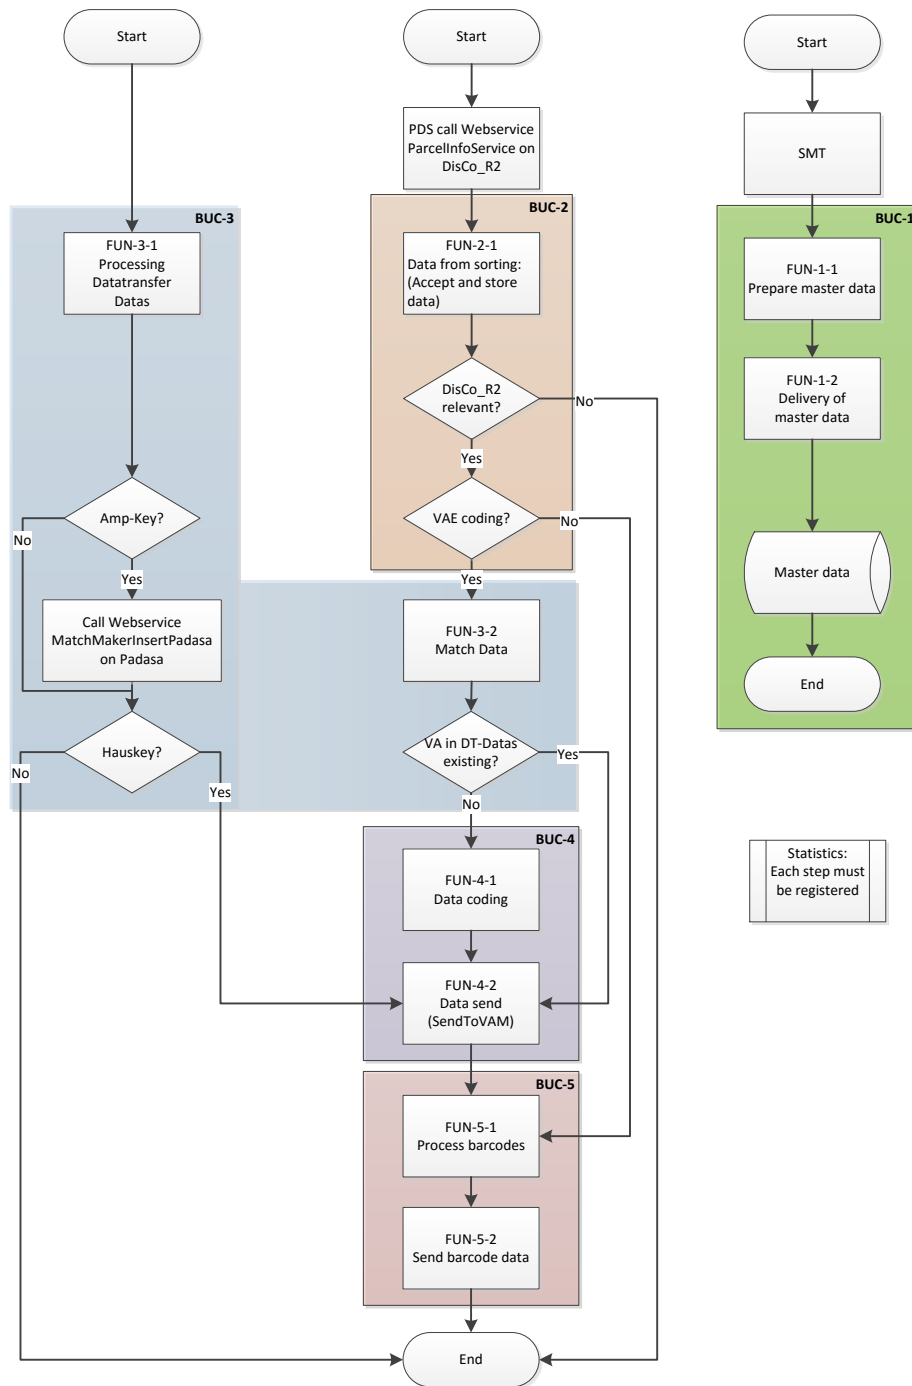

Figure 2 Flowchart data flow

3. State of Business Use Cases and Functions

BUC-ID	Titel des Business Use Case	FUN-ID	Titel der Anforderung	STK-ID	Prio (M/K)	Status (OK/NOK)	FaFo	Status	Auftrag/Projekt	Datum

		FUN-5-2	Send barcode data	STK-2	M	OK	FaFo-5-3 Send barcode data to Padasa			
				STK-2	M	OK	FaFo-5-4 Complete			

4. Detailed requirements

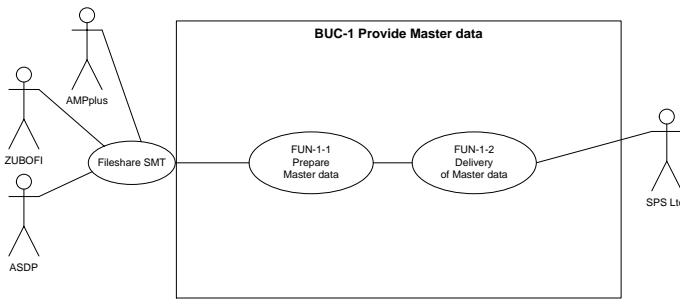

The detailed requirements describe the demands for the new respectively changed system (SOLL state). When required some of the detailed requirements are specified in detailed specifications furthermore.

- Tip:
- The mentioned Stakeholder (STK) are in the document according to Stakeholderliste (see chapter 4 reference documents).

4.1 Functional requirements

A functional requirement is every requirement which makes a declaration to the pure function.

4.1.1 BUC-1 Provide Master data

BUC-1	Description
Short description	DisCo get the master data from Fileshare SMT. These are personal data (AMPplus), incl. individual and global aliases, address data (ZUBOFI), zip codes (ASDP with information on operational units and company postal code). All these master data are made available for manual data entry.
Trigger	AMPplus, ZUBOFI and ASDP deliver new MasterData for SMT. The actor obtains master data from SMT.
Precondition	SMT is available and new master data were delivered and stored by SMT
Standard process	
Alternative	Existing master data will be used if there by SMT are no new master data available.
Exceptions	No
Outcome	Master data are made available for SPS.

4.1.1.1 FUN-1-1 Prepare master data

FaFo-1-1 Provide Personal data				
Categorization	Person in charge	STK-18	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Master data from AMPplus (personal data) are made available for DisCo. This are Names, Pers-Key, AMP-Key, Hauskey, Aliases and Pickpost/Mypost24-customer number.			
Actor	DisCo-SMT-Scheduler			
Triggering event	Scheduler fetch data from SMT.			
Precondition	SMT is available			
Diagram (Recommended)				
Standard process	<p>A scheduler runs regularly, deltas every day at 04:00 CET and full weekly at sunday 03:00 CET, to look for AMPplus data (full or delta delivery stored by SMT). If new data are available, they should be copied into a database. New datas are available if there at SMT in directory <AMPplus\xxx\01_Aktiv> datas with actual date (Filenames PL.KUN_XXXXXX_ddmmyy014006.xml contain the actual date).</p> <p>Following tables of AMPplus will be provided:</p> <ul style="list-style-type: none"> - Persons - Individual Aliases <p>Content of data for Persons and Aliases see chapter 4.4.2</p> <p>Only inland addresses (domicile and postfach) are provided</p> <ol style="list-style-type: none"> Up-to-date personal data: The up-to-date residential and business addresses need to be made available during data preparation. Considered as up-to-date are addresses that are valid and effective as from today and in the future and checked by AMPplus. Mutations are delivered in Delta. Duplicates in AMPplus are not delivered. Historically active personal data: These data are specified by AMPplus as "historically active". In other words, they are addresses from which a change of residence is done (redirection order is valid). Such residential and business addresses need to be made available during the data preparation. 			
Alternative	The scheduler can be manually executed at any time			
Exceptions	If new data are not available, then processing is completed and prepared for the next run. There is a message that no new data were found.			
Postcondition (Result)	Master data are made available for DisCo.			

It is possible to see on what day which master data version was made available.

FaFo-1-2	Provide Address data			
Categorization	Person in charge	STK-20	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Master data from ZUBOFI (address data) are made available for DisCo. This are streetname, housenumber, ZIP-Code, locations, aliases to street and locations, streetnumber and Hauskey.			
Actor	DisCo-SMT-Scheduler			
Triggering event	Scheduler fetch data from SMT			
Precondition	SMT is available			
Diagram (Recommended)				
Standard process	<p>A scheduler starts regularly, every sunday at 02:30 CET to search on SMT for ZUBOFI data.</p> <p>If new data are available, they will be copied into a database. New datas are available if there at SMT in directory <ZUBOFI_DISCO\01_Aktiv> datas with actual date (Filenames as example PL.ZUBOFI_ADR_provide_SE-S-SPO_V0100_17052016115506_158_20160517.xml contain the actual date).</p> <p>Following tables of ZUBOFI will be provided:</p> <ul style="list-style-type: none"> - PLZ - LOK - LOKA - ADR - AADR <p>Content of data for Persons and Aliases see chapter 4.4.3</p>			
Alternative	The scheduler can be manually executed at any time.			
Exceptions	If new data are not available, then processing is completed and prepared for the next run. There is a message that no new data were found.			
Postcondition (Result)	Master data are made available for DisCo. It is possible to see on what day which master data version was made available.			

FaFo-1-3	Provide PLZ			
Categorization	Person in charge	STK-21	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Master data from ASDP (ZIP with details of operation sites) and ASDPPLZ (companies ZIP) are made available for DisCo			
Actor	DisCo-SMT-Scheduler			
Triggering event	Scheduler fetch data from SMT			
Precondition	SMT is available			
Diagram (Recommended)				
Standard process	<p>A scheduler starts regularly, every day at 02:30 CET to search on SMT for ASDP and ASDPPLZ data.</p> <p>If new data are available, they will be copied into a database.</p> <p>Following tables of ASDP will be provided:</p> <ul style="list-style-type: none"> - ASDP = ZIP with details of operation sites - ASDPPLZ = ZIP with attributes to companies ZIP <p>Content of data for ZIP see chapter 4.4.4</p>			
Alternative	The scheduler can be manually executed at any time.			
Exceptions	If new data are not available, then processing is completed and prepared for the next run. There is a message that no new data were found.			
Postcondition (Result)	<p>Master data are made available for DisCo.</p> <p>It is possible to see on what day which master data version was made available.</p>			

FaFo-1-5	Prepare Master data			
Categorization	Person in charge	STK-2	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Master data from DisCo database are prepared for the usage of data entry at manual coding (SPS Vietnam).			
Actor	DisCo			
Triggering event	DisCo-SMT-Scheduler are completed successfully			
Precondition	DisCo databases are available			
Diagram (Recommended)	It may be that data must be normalized or summarized. Discussion with SPS, suggestions and ideas might be addressed in SPS project concept.			
Standard process	Master data from DisCo database will be prepared for data entry.			
Alternative	If from one of the FaFo's no new datas delivered, don't prepare new master datas. The system should use the last successfull prepared datas.			
Exceptions	No			
Postcondition (Result)	Master data are made available for manual data entry.			

4.1.1.2 FUN-1-2 Delivery of master data

FaFo-1-6 / FaFo-1-7	Processing of file delivery and provision of data to SPS			
Categorization	Person in charge	STK-7	Version	1
	Priority (M / K)	M	Status (OK / NOK)	NOK
Use case diagram				
Short description	Master data are made available for the clients of manual data entry.			
Actor	DisCo			
Triggering event	FaFo-1-5 completed			
Precondition	DisCo database is available			
Diagram (Recommended)	It is conceivable that the clients access DisCo also via web service. Therefore, the procedures presented here would change. Discussion with SPS, suggestions and ideas as part of SPS concept.			
Standard process	Master data from DisCo database is prepared for manual data entry.			
Alternative	If there no new data prepared by FaFo-1-5 it's nothing to delivery. The system should use the last successfull delivered datas.			
Exceptions	No			
Postcondition (Result)	Master data are available for manual data entry.			

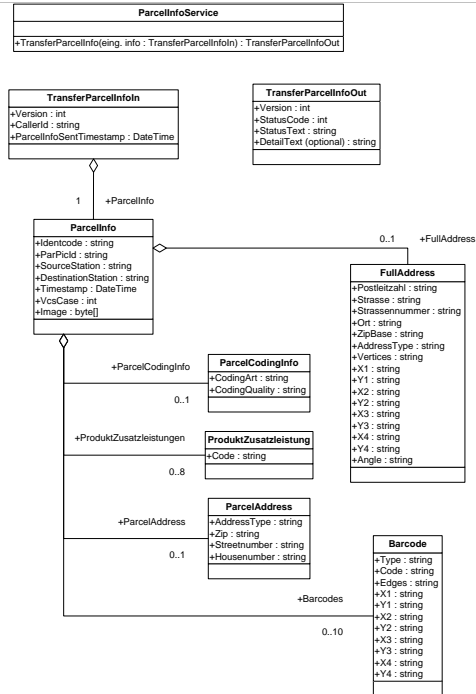

4.1.2 BUC-2 Provide consignment data

BUC-2	Description
Short description	Data supplied by PDS (parcel data and images) are imported by DisCo. Data, which should be filtered and not go through data entry, will be transferred directly to BUC-5.
Trigger	PDS calls web service of DisCo and transfers data.
Precondition	PDS and DisCo are available
Standard procedure	
Alternative Exception	No
Result	DisCo received data and images from the PDS and stored for further processing to BUC-3. Data, which should be filtered and not go through data entry, will be transferred directly to BUC-5. Datas with "No further processing" will recorded statistically and process is ended.
Document	Description Webservice at document [03] <PDS_ParcelInfoService_V0224.docx>, and document [12] SY_Schnittstelle_PDS_DISCO_V0103.docx in chapter 4

4.1.2.1 FUN-2-1 Data from sorting

FaFo-2-1	Read RPP data			
Categorization	Person in charge	STK-2	Version	1
	Priority (M / K)	M	Status (OK / NOK)	NOK
Use case diagram				
Short description	<p>Each PDS receives from all connected ACS (PAR) one or two RPP messages per coding. Exactly one RPP message per ACS coding is determined for each of the forwarding to DisCo. This message is recognized by PDS with the help of RPP Tags VCASE = 0 or VCASE = 1.</p> <p>The PDS will forward a subset of RPP data and the image (Full Binary) via ParcelInfoService to DisCo. ParcelInfoService is a web service which is provided by DisCo and is called by PDS.</p> <p>Data is stored on DisCo for further processing.</p> <p>Goto next step FaFo-2-2 (Filter).</p>			
Actor	PDS, DisCo			

Triggering event	PDS calls the web service.
Precondition	PDS and DisCo are available.
Diagram (Recommended)	<pre> sequenceDiagram participant PDS participant DisCo participant DisCo-Statistik Note over PDS, DisCo: FaFo-2-1 PDS->>DisCo: ParcelInfoService DisCo-->>PDS: response DisCo->>DisCo-Statistik: Statistik Note over DisCo, DisCo-Statistik: FaFo-2-2 DisCo->>DisCo-Statistik: Filter DisCo-Statistik-->>DisCo: Statistik </pre>
Standard process	<ul style="list-style-type: none"> Awaiting information The ParcelInfoService, which runs on DisCo, is called by PDS. PDS delivers a subset of information from the ACS (RPP message) to DisCo. In the web service, we have defined many fields, which contain numerical values, as integer rather than string. The reason is that question marks ("?" Or "????") might be sent in PP2000 protocol. Most of these fields are not required by the PDS itself and stored 1:1 into the PDB Oracle image database. There, these fields are present in each case as VARCHAR. It is therefore to be expected that on DisCo question marks may occur in such fields. <p>File architecture of PacellInfoService:</p>

The RPP message is created for the first time after the ACS-coding, that is 2-8 seconds after the coding of the image. This also applies to consignments which are undergoing VCS coding. Due to the early creation of the RPP message, it is no longer possible to consider the VCS coding for DisCo. It is also to be expected with unusable images (Address not on image, etc.)

- Read RPP data
Data is stored on DisCo. DisCo confirms to PDS the receiving.
- DisCo writes statistics upon receiving the data.
- Further processing of the data is triggered.

Alternative	ACS cannot read or insufficient address information for sorting, but Identcode has been found and read: The picture and the RPP message shall be made available for PDS. Here the process may vary either by more data to be captured or not usable image.
Exceptions	If DisCo cannot store the data and confirm to PDS “successfully”, a appropriate feedback must be sent to PDS. In that case, DisCo may not store data and must reverse the steps. In this case, an error message must be written.
Postcondition (Result)	ACS information were transferred to DisCo via RPP message. The associated image is available on DisCo. Statistics are tracked. Further processing (Filtering FaFo-2-2) is triggered.

FaFo-2-2	Filter			
Categorization	Person in charge	STK-2	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Each record is checked whether this is for DMC-processing (DataMatrixCode), for capturing or for DisCo not relevant. The record is marked accordingly. Each processing step is statistically recorded.			
Actor	DisCo			
Triggering event	FaFo-2-1			
Precondition	DisCo is available			
Diagram (Recommended)				
Standard process	<p>DisCo checks the data whether they are subject to a special filtering and marks them accordingly.</p> <p>Filtering Filtering is used to controll which data and images do not need to be captured or not go through DMC-processing:</p>			

Filtering				
Description	Criterion	Value	Direct processing DMC	No further processing
Foreign parcel	ADR_TYP	A	X	
Foreign parcel	Identcode	99650000*	X	
Consignment without Identcode	Identcode			X
MCS Consignment	CODQUAL	90	X	
Extra service TSR	PRZL	1000	X	
Extra service GAS	PRZL	203	X	
Returns	Identcode	??01*	X	
No image	HasImage	False		X
Identcode not 18-digit	Identcode	.*(?!^d{18})		X
Remote parcel	CODQUAL	50	X	
Redirection and Military	PRZL	1020 1007	X	
Return consignment	PRZL	1030	X	
Transfer consignment	PRZL	1040	X	
Consignment from LCU	CODQUAL	71	X	
Successful VCS-Abort	CODQUAL	72	X	
Same Identcode repeatedly	Zeitdifferenz (minutes)	180		X
Exklusive Company PLZ	PLZ_TYP und LogistischerTyp=false	PLZTYP=40 and LOGTYP=0	X	
Logistics Company PLZ	PLZ_TYP und LogistischerTyp=true	PLZTYP=40 and LOGTYP=1	X	
Post internal PLZ	PLZ_TYP	80,99	X	
ZIP code	PLZ	303000	X	
PAR=full address available	CODQUAL	67 (from PAR) or 61 (from other PLZ)	X	
All non-filtered data are for capturing (full address data entry).				
Alternative	<p>If DISCO receive from PDS data with PRZL=203 (GAS) and full address from PAR (CODQUAL=61 or 67) send this datas to VAM and record submit to BUC-5 (DMC coding) --> additional new step</p> <p>If DISCO receive from PDS data with PRZL=203 (GAS) without full address from PAR (CODQUAL=61 or 67) submit record to BUC-5 (DMC coding) --> actual step</p> <p>No</p>			
Exceptions	No			
Postcondition (Result)	<p>The data are available for further processing and contain the relevant characteristics for the next steps. The data are stored and available for next process steps BUC-3 or BUC-5. Datas with "No further processing" will recorded statistically and process is ended.</p> <p>Each processing step is statistically recorded, it should be also apparent which filter has been applied.</p>			

FaFo-2-3	Create statistics			
Categorization	Person in charge	STK-2	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Each data set and each processing step is statistically recorded.			
Actor	DisCo			
Triggering event	FaFo-2-1 or FaFo-2-2			
Precondition	DisCo is available			
Diagram (Recommended)				
Standard process	<p>Data reception and the status for further processing (filter or parameter) is recorded in statistics. The whole record, all changes and the timestamps of each each processing step should be recorded. Each processing step results in a new entry in the statistics. The statistics should show which processing step the consignment is in and how long the processing step took.</p> <p>Identcode acts as the master key.</p>			
Alternative	No			
Exceptions	No			
Postcondition (Result)	Statistics entries created.			

4.1.3 BUC-3 Match and distribute data

BUC-3	Description																																																																									
Short description	<p>1) DataTransfer provides address information to consignments which arrive 45 minutes after address information are available at the parcel center. DPM will hand over informations Identcode, AMP-Key, Hauskey and services. Validated data with a Hauskey>0 are passed to VAM and to Padasa.</p> <p>Verify receiver info</p> <table><thead><tr><th colspan="10">Data from DPM (EA)</th><th>Action of Disco</th><th>Data from DPM (EA) to Disco</th><th>Data from PDS to Disco</th></tr><tr><th>Case</th><th>AMP-Key (*)</th><th>Name/Firmenname</th><th>Strasse/Postfach</th><th>Postleitzahl</th><th>Ort</th><th>ParcelStreetNr</th><th>ParcelHausKey/HausKey (*)</th><th>Delete AMP-Key before send</th><th>After Verifying Disco send to</th><th>After Matching Disco send to</th><th></th></tr></thead><tbody><tr><td>1</td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td>VAM PADASA VAM VAM</td></tr><tr><td>2</td><td><input type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td></tr><tr><td>3</td><td><input checked="" type="checkbox"/></td><td><input type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td></tr><tr><td>4</td><td><input type="checkbox"/></td><td><input type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td><td><input checked="" type="checkbox"/></td></tr></tbody></table> <p>+ If DPM doesn't have ParcelHausKey, Disco will copy HausKey to ParcelHausKey before sending to VAM and PADASA + (*) AMP-Key, ParcelHausKey and HausKey are valid if they are a number greater than 0</p> <p>2) Parcel data from PDS (P-data) are checked whether there are already existing verified address data from DPM. If the parcel data already has an AMP-Key>0, it will be forwarded to VAM (see table before). If there is still no AMP-Key and if it is not a company or Post Internal ZIP, the data incl. picture will be transmitted to manual data entry. Actor	DisCo																																																																																	
Triggering event	Available data via FaFo-3-1																																																																																	
Precondition	Fafo-3-1 has been completed and data with AMP-Key or a Domizil-HAUSKEY or Parcel HAUSKEY are available.																																																																																	
Diagram (Recommended)																																																																																		
Standard process	<p>If a unique record from an DPM query is ascertained, and if a Domizil-HAUSKEY>0 or Parcel HAUSKEY>0 exist, DisCo will send all data to VAMs (without class data and field ItemUID) and to Padasa (with class data or only field ItemUID).</p> <p>If Parcel-Hauskey is empty, the value of Domizil-Hauskey will be taken over in the Parcel-Hauskey field, when sent to VAM and Padasa. This because VAM work with Parcel-Hauskey.</p>																																																																																	
Alternative	No																																																																																	
Exceptions	<p>If Padasa or one of the VAM stations are not available, the addresses cannot be transmitted. In this case, an error message is written (every 15 minutes, adjustable about parameter). The transmission should be executed periodically, if successful, a success message is written.</p>																																																																																	
Postcondition (Result)	Data are successfully sent to Padasa and all VAM stations. Statistics are tracked.																																																																																	

Intern

4.1.3.2 FUN-3-2 Match

FAfo-3-4		Match data		
Categorization	Person in charge	STK-7	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Parcel data, which are from PDS and proper for data entry, should be verified whether address data of DataTransfer already exist. If the parcel data already have AMP-Key>0, they should be forwarded to VAM. If not the data will be prepared to manual coding (BUC-4).			
Actor	DisCo, VAM			
Triggering event	BUC-2 FUN-2-1 FaFo-2-2 have data stored and are available with relevant characteristics			
Precondition	PDS has delivered data to DisCo. DisCo has completed the data filtering.			
Diagram (Recommended)				
Standard process	<p>Newly stored data from BUC-2 (without filtering), should be matched with existing, verified address data from Fafo 3-1.</p> <p>If there are verified address data with full addresses (AMP-Key>0 and Hauskey) and not marked as manual or captured, they will be forwarded to VAM stations. Datas with a match will be delivery with CallerID=VG to VAM. It's possible that this process can be the same as the process BUC-4 FUN-4-2. Need to be defined in the concept papers.</p> <p>Upon successful handover to VAM, statistics will be tracked and mark the data as "captured".</p>			
Alternative	<p>If there are not verified address data they will be stored with relevant characteristics to further process BUC-4 FUN-4-1.</p> <p>Statistics will be tracked and mark the data as "manual".</p>			
Exceptions	<p>If one of the VAM station is not available, the addresses cannot be transmitted. In this case, an error message is written (every 15 minutes, adjustable about parameter). The transmission should be executed periodically, if successful, a success message is written. All other VAM stations will be operated with the data.</p>			
Postcondition (Result)	<p>DisCo has distributed data to VAM and statistics marked these as "captured" or the data is marked with relevant characteristics to further process BUC-4 FUN-4-1 and statistics marked these as "manual". Statistics are tracked.</p>			

4.1.4 BUC-4 Offshore data entry

BUC-4	
Short description	Description Via system DisCo, data and images which are not processed yet, will be passed to the manual data entry. According to specifications (detection rules) to be AMP-Key, domiciliary and Parcel HAUSKEY and services, as well as customer numbers, captured and returned via DisCo on VAM. The images are not returned and discarded in the manual coding.
Trigger	DisCo provides parcel data and images
Precondition	VAM, DisCo and manual coding are available. SPS Ltd. has the master data obtained from BUC-1 and provided for the acquisition.
Standard process	
Alternativen	No
Exceptions	a) If SPS Ltd. is not available, data cannot be transferred to manual data entry. In this case, an error message is written (every 15 minutes, adjustable about parameter). The transmission should be executed periodically, if successful, a success message is written. b) If VAM is unavailable, data cannot be transmitted. In this case, an error message is written (every 15 minutes, adjustable about parameter). The transmission should be executed periodically, if successful, a success message is written.
Result	For each fetched row manual coding has given feedback, statistics are tracked. The feedback goes to VAM
Documents	Descriptions - Erfassungsregeln_GHP - Capture procedure at SPS Ltd. in doc [07] VAE_Agreement_zu_Erfassungsregeln_20170530.V3.4.pdf> - Webreport, manage configuration in doc [14]

4.1.4.1 FUN-4-1 Capture data

FAfo-4-1		Search		
Categorization	Person in charge	STK-7	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Not VAE-processed data are searched and handed over the manual coding for recording.			
Actor	DisCo, SPS Ltd.			
Triggering event	BUC-3			
Precondition	DisCo completes the data filtering and already marked validated data assended to VAM.			

Diagram (Recommended)	
Standard process	BUC-3 labeled data (data without a filter characteristic and not yet processed VAE) are given in the manual coding. The statistics will be tracked.
Alternative	No
Exceptions	If SPS Ltd. is not available, data cannot be transferred to offshore. In this case, an error message is written (every 15 minutes, adjustable about parameter). The transmission should be executed periodically, if successful, a success message is written.
Postcondition (Result)	Data are in the manual coding, statistics are tracked.

FaFo-4-2 – FaFo-4-4				
Categorization	Capture Keyword, AMP-Key and Hauskey		Version	1
	Person in charge	STK-7	Status (OK / NOK)	OK
	Priority (M / K)	M		
Use case diagram				
Short description	In the manual coding should Pers_Key and AMP-Key, domiciliary and Parcel Hauskey, services and customer numbers are recorded.			
Actor	DisCo, SPS Ltd.			
Triggering event	The capture clients of manual coding received data.			
Precondition	Users are logged on to the Capture Clients			
Diagram (Recommended)				

Standard process	<p>The process at SPS Ltd. acc. Document <VAE_Agreement_zu_Erfassungsregeln_20170530.V3.4.pdf> needs to be revised. Let's observe also the following points:</p> <p>Adressen mit Exklusive Firmen-PLZ were found in search and captured as Full Address. In order that Re-processing address with company plz will be not performed, the Vietnam-client must put ParcelAdrType += Firmen-PLZ in full address for ASDP.PLZTyp=40 (Firmen-PLZ).</p> <p>Adressen with Logistische Firmen-PLZ such as PostInternal-PLZ will be not found in search. Because Vietnam-Client have got no Stammdaten from GWB , an not-validated address in Vietnam will be coded. The Re-processing will be not performed without Volle-Adresse , because of the lack of Amp-Key and der HausKey. The sorted relevant address will be captured by VCS or MCS.</p>
Alternative	If no match with the master data can be found, the missing information of the address is to be entered manually.
Exceptions	If SPS Ltd. is not available, data cannot be transferred to offshore. In this case, an error message is written (every 15 minutes, adjustable about parameter). The transmission should be executed periodically, if successful, a success message is written.
Postcondition (Result)	DISCO SPS Ltd. receive a full address and stored. Statistics are tracked.

4.1.4.2 FUN-4-2 Data ~~senden~~ versenden

FAfo-4-5	Send data			
Categorization	Person in charge	STK-2	Version	1
	Priority (M / K)	M	Status (OK / NOK)	NOK
Use case diagram				
Short description	DisCo has sent the address data from manual data entry to VAM			
Actor	DisCo, VAM			
Triggering event	BUC-4 FUN-4-1 or BUC-3 FaFo-3-4			
Precondition	DisCo received response data from the manual data entry.			
Diagram (Recommended)				

Standard process	<p>BUC-4-FUN 4-1 newly stored data is forwarded to the appropriate VAM stations. <u>DISCO uses value of element DestinationStation (PDS) to find the appropriate VAM.</u> <u>Example : "DAI-PDS01" -> Disco extracts the value and get 3 first characters 'DAI' to find & send response to DAI-Station.</u> <u>We also define list of VAM station rules as below:</u></p> <table><tr><th>Source</th><th>Destination Value</th><th>VAM Station</th></tr><tr><td><u>PDS</u></td><td><u>HAE-PDS01</u></td><td><u>HAE</u></td></tr><tr><td><u>PDS</u></td><td><u>DAI-PDS01</u></td><td><u>DAI</u></td></tr><tr><td><u>PDS</u></td><td><u>FRA-PDS01</u></td><td><u>FRA</u></td></tr><tr><td><u>PDS</u></td><td><u>LCU-PDS01</u></td><td><u>HAE</u></td></tr><tr><td><u>PDS</u></td><td><u>VET-PDS01</u></td><td><u>VET</u></td></tr><tr><td><u>PDS</u></td><td><u>UTZ-PDS01</u></td><td><u>UTZ</u></td></tr><tr><td><u>PDS</u></td><td><u>CAD-PDS01</u></td><td><u>CAD</u></td></tr><tr><td><u>DPM</u></td><td><u>Empty</u></td><td><u>All</u></td></tr></table> <p>Upon successful handover to VAM, statistics will be tracked and marks the data as encoded. <u>The same webservice to How-datas-processed-and-send to VAM will be used by defined and discuss-between SPS and PL. It's possible that this can be about FUN-3-2 and FUN3-1.</u></p>	Source	Destination Value	VAM Station	<u>PDS</u>	<u>HAE-PDS01</u>	<u>HAE</u>	<u>PDS</u>	<u>DAI-PDS01</u>	<u>DAI</u>	<u>PDS</u>	<u>FRA-PDS01</u>	<u>FRA</u>	<u>PDS</u>	<u>LCU-PDS01</u>	<u>HAE</u>	<u>PDS</u>	<u>VET-PDS01</u>	<u>VET</u>	<u>PDS</u>	<u>UTZ-PDS01</u>	<u>UTZ</u>	<u>PDS</u>	<u>CAD-PDS01</u>	<u>CAD</u>	<u>DPM</u>	<u>Empty</u>	<u>All</u>

Diagram (Recommended)								
Standard process	The images (contained in the data) are read and checked for existing DMC codes. Codes listed below are to be read and the contents should be stored.							
	<table><tr><th>Description</th><th>Value</th></tr><tr><td>Frankiermerkmal SCHAPO</td><td>1;FM SCHAPO;DMC; (7561090)[0-9]{32}{01}{0-9}{19}{0}</td></tr></table>				Description	Value	Frankiermerkmal SCHAPO	1;FM SCHAPO;DMC; (7561090)[0-9]{32}{01}{0-9}{19}{0}
Description	Value							
Frankiermerkmal SCHAPO	1;FM SCHAPO;DMC; (7561090)[0-9]{32}{01}{0-9}{19}{0}							

Intern

	Frankiermerkmal IFS 1.0	2;FM IFS1;DMC; [0]{22}[0-9]{64}(00)
	Frankiermerkmal IFS 2.0	3;FM IFS2;DMC; (7568001)[0-9]{53}
	Frankiermerkmal WebStampPM	4;FM WSM;DMC; (7568015)[0]{9}[0-9]{70}(01)
	Frankiermerkmal YMAGO	5;FM YMA;DMC; (7561029)[0-9]29
	Frankiermerkmal IFS 3.0	6;FM IFS3;DMC; (7568003)[0-9]{53}
	Processed data will be marked as BCsend.	
Alternative	If there are no such codes available, data is marked as BCworked.	
Exceptions	No	
Postcondition (Result)	Contents of the relevant codes are stored, data are marked as BCsend or BCworked. The statistics are tracked. Trigger to FUN-5-2	

4.1.5.2 FUN-5-2 Send barcode data

FaFo-5-3	Send Barcode data to Padasa			
Categorization	Person in charge	STK-2	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Data marked with BCsend will be passed to Padasa and then marked as BCworked. Statistics will be tracked.			
Actor	DisCo			
Triggering event	BUC-5 FaFo-5-1			
Precondition	Data are made available from BUC-5 FaFo-5-1			
Diagram (Recommended)				
Standard process	Barcode contents with the mark BCsend is used to call the web service of Padasa and the data are passed to Padasa. Data are marked as BCworked. Statistics will be tracked.			
Alternative	No			
Exceptions	If Padasa is unavailable, data from BUC-5 cannot be transmitted. In this case, an error message is written (every 15 minutes, adjustable about parameter). The transmission should be executed periodically, if successful, a success message is written.			
Postcondition (Result)	Contents of relevant barcodes are stored. Data are marked as BCworked. The statistics are tracked. Trigger to FaFo-5-4			

FAfo-5-4	Complete			
Categorization	Person in charge	STK-2	Version	1
	Priority (M / K)	M	Status (OK / NOK)	OK
Use case diagram				
Short description	Data marked as BCworked will be completed and the processing is ended. Data is marked as finished. Statistics will be tracked.			
Actor	DisCo			
Triggering event	BUC-5 FaFo-5-3			
Precondition	Data are available from BUC-5 FaFo-5-3			
Diagram (Recommended)				
Standard process	Data using the mark BCworked be completed and the processing is terminated. The data is marked as finished. The statistics will be tracked.			
Alternative	No			
Exceptions	No			
Postcondition (Result)	The data are marked as finished. The statistics are tracked.			

4.2 Quality requirements

User-related non-functional requirements. The ISO 9216 is an extensive collection of possible quality requirements:

- Usability (comprehensibility, learnability, operability).
- Efficiency (time behavior, consumption behavior).
- Reliability (maturity, fault tolerance recoverability).
- Changeability (analysability, modifiability, stability, testability).
- Transferability (of installation, portability, coexistence, interchangeability).

QAfo-1	Prioritization of PZ consignment over LCU consignment			
Categorization	Person in charge	STK-4	Version	1
	Importance (1-5)	2	Priority (1-5)	2
Precondition	DisCo will receive datas from PDS (see BUC-2)			
Description	This datas have a SourceStation definition. Shipments of the PZ (DAI, HAE, FRA) must be treated as a priority and in consignments from LCU. The setting, which SourceStation in which priority, is adjustable about parameter Process the datas from PZ (92% from all received datas) immediately and process the datas from LCU (8% from all received datas) as second priority.			

QAfo-2	Performance from provide consignment data (BUC2) to Offshore data entry (BUC-4)			
Categorization	Person in charge	STK-4	Version	1
	Importance (1-5)	1	Priority (1-5)	1
Precondition	Received datas from PDS are stored in DisCo.			
Description	Timeline for process from stored data (end of process FaFo-2-1) to Offshore data entry (end of process FaFo-4-2) is: <ul style="list-style-type: none"> - for PZ datas <= 27 seconds with 90% of the data - for PZ datas <= 45 seconds with 10% of the data - for LCU datas <= 900 seconds (15 minutes) with 100% of the data 			

QAfo-3	DisCo-Statistik			
Categorization	Person in charge	STK-3	Version	1
	Importance (1-5)	1	Priority (1-5)	2
Precondition	Process steps and data handling			
Description	Each step, include possible change in the data, to a consignment must be logged. This logging can be carried out as a log file or in a database structure. The datas should be available for 60 days back (dynamically definable)			

4.3 Requirements regarding development and maintenance environment

Requirements for development and maintenance environment such parallelization, technology, programming policy, naming conventions, testability, etc.

EAfo-4	Environment			
Categorization	Person in charge	STK-22	Version	1
	Importance (1-5)	1	Priority (1-5)	1
Precondition	Environment is discussed between development and IT Post			
Description	For best flexibility we should use virtual technologie.			

4.4 Requirements regarding interfaces

Professional, technical and organizational requirements for the interfaces such as protocol and infrastructure, formats, limitations and conditions, timing, synchronization of the interface, data volume (minimum, average, maximum), error handling, security.

Whether a separate interface documentation for each interface is necessary, must be judged situationally.

4.4.1 Data from PDS

SAfo-5	Big images in KByte			
Categorization	Person in charge	STK-2	Version	1
	Importance (1-5)	2	Priority (1-5)	2
Precondition	The size of the parcel image has an influence on the transmission of data (time)			
Description	Allowed to DisCo the data transmission of each data set PDS not exceed the period of 0.3 seconds.			

4.4.2 Data from AMPplus

SAfo-6	Content of data Persons			
Kategorisierung	Verantwortlicher	STK-15	Version	1
	Wichtigkeit (1-5)	2	Dringlichkeit (1-5)	2

4.7 Requirements regarding operation

Operation-related non-functional requirements such as reliability, availability, etc.

In addition, these requirements are used as input into the operational concept and the Service Level Agreement (SLA).

BAfo-12	Housekeeping			
Categorization	Person in charge	STK-	Version	1
	Importance (1-5)	2	Priority (1-5)	2
Precondition	No			
Description	<p>Stored transaction data (data from PDS from BUC-2 and data from Datatransfer from BUC-3) DisCo are of a housekeeping after a certain period (dynamically definable) deleted.</p> <p>Data storage: All data in DisCo during a configurable time period (Default: 14 days) are stored and erased after this time from housekeeping service.</p>			

BAfo-13	Filter			
Categorization	Person in charge	STK-2	Version	1
	Importance (1-5)	1	Priority (1-5)	1
Precondition	No			
Description	The filter must be able to be adjusted dynamically.			

4.8 Requirements from ISDS concept

List of requirements from the ISDS concept as transport of data, communication partners, etc.

ISAfo-14	Communicatziön between CH and VN			
Categorization	Person in charge	STK-22	Version	1
	Importance (1-5)	1	Priority (1-5)	1
Precondition	The communication between switzerland and Vietnam is installed about swiponet			
Description	<p>Swiponet is a logical name fort he network „Swiss Post Net“ which is used fort eh communication between Switzerland and Vietnam. This network is guaranteed by different providers (today Swisscom, Open Systems and United Security Providers) and offers no network base services like DHCP, DNS, NTP etc..</p> <p>All locations or the respective main location per country are bound on Internet VPN (Open Systems) tot he Swiss Post. Swiponet guarantees the sure transference oft he data oft he foreign societies tot he Swiss Post.</p>			

Tipp: die Nummerierung (1 bis n) der Detailanforderungen kann so automatisch aktualisiert werden:

1. "Ctrl + F2" drücken.
2. Der Druckvorschau schliessen (oder „Esc“ drücken).
3. Die Nummerierung wurde automatisch aktualisiert.
